### **DETAILED ACTION**

1. Claims 1-3, 14-16, 21, 22 and 23-43 are presented for examination.

#### ***Allowable Subject Matter***

2. Claims 1-3, 14-16, 21, 22 and 23-43 are allowed.

#### ***Reasons for Allowance***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
  - a. Darbee (U.S. Patent No. 5,255,313) discloses a universal remote control comprising an input circuitry including a set of keys for inputting commands into the remote control, an infrared signal output circuitry including IR lamp driver circuitry for supplying an infrared signal to a controlled device, a CPU coupled to the input circuitry and to the signal output circuitry, a memory coupled to the CPU, and data coupling circuitry and structure for periodically coupling a computer to the remote control for inputting from the computer memory appropriate IR lamp driver instructions for causing the infrared signal output circuitry to emit infrared signals which will cause specific functions to occur in a specific controlled device, for operating a variety of devices to be controlled into the memory of the remote control to enable the remote control to control various

Art Unit: 2116

devices to be controlled upon the inputting of commands to the keys of the input circuitry.

b. Allport (U.S. Patent No. 6,104,334) discloses a remote control dedicated to the control of various consumer devices made by various manufacturers. The remote control has programmable function keys (both physical and on-screen), and a graphical display used to show status and help information on the devices being controlled, identify the function associated with each key, and allow the consumer to browse, select, or otherwise manipulate data related to the control of the consumer devices. The remote control communicates directly with the devices being controlled, or through other proprietary base stations with known protocols (e.g., X10 or CEBus) if necessary.

4. The following is an examiner's statement of reasons for allowance:

Applicant's claimed invention distinguishes over the prior art for the following reasons. The claims are allowable over the prior art of record because none of the references, either alone or in combination, discloses or renders obvious the remote control comprising, among other things, a memory pre-programmed with addresses and commands for a plurality of electronic devices for a home theatre system; a processor configured for communicating with the memory to access the addresses and commands for the plurality of electronic devices, and for storing in the memory a plurality of signals encoded with the respective addresses and commands; an initiation device capable of communicating with the processor so that when the initiation device is activated the processor encodes an address and a command into a respective one of the signals for

Art Unit: 2116

each electronic device in the plurality of electronic devices; and a plurality of transmitters capable of communicating with the processor where the processor directs the transmitters to simultaneously and automatically send the respective signals to the plurality of electronic devices.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
